Acknowledgements

First of all I would like to express my deep gratitude to Dokuz Eylül University, a state university of İzmir in Turkey, for my financial support and to all citizens who virtually contributed to this support with their taxes. Without this, my research in the University of St. Andrews would not be possible. Special thanks go to Professor Güzin Gökmen on behalf of all staff at Dokuz Eylül University especially in the Department of Mathematics and also to Associate Professor Şennur Somalı for many good words of encouragement. Şennur’s enthusiasm in research has inspired my mathematical life.

I don’t know how to thank my advisor Dr. George M. Phillips for his guidance, for teaching me how to write mathematics, always having time for me, lots of encouraging words and a child-like happiness over mathematical discussions and a shared love of piano music. It is such a great pleasure to work with him. Together with his wife Rona Phillips, they not only made Scotland my second home but also gave me a rainbow colour life over the grey sky. Thank you so much.

I would like to thank my family Hursit, Şaziye, and Gülaziye Oruç and my maternal uncle Bahri Kaderoğlu whose mathematical soul helped me become a mathematician and also his wife Makbule and my cousins Nurdane and Ferdane. Their love, trust and respect, not only over the last three years but throughout my life, have turned far distances close to my heart.
